PROFILE

Gameplay Programmer / Simulation Engineer specialising in Unreal Engine 5 and C++. Experienced in gameplay systems, state machine design, UI programming, multiplayer networking, vehicle-interior simulation and synthetic data generation. Comfortable in Agile international teams.

TECHNICAL SKILLS

Engines:	Unreal Engine 5 (primary), Unity 6	XR / Graphics:	Apple Vision Pro (PolySpatial), Vulkan, GLSL, HLSL
Languages:	C++ (primary), C#, Blueprint, Python, Java, SQL	Platforms:	PC (Windows), Android, visionOS
UE5 Tech:	UMG, MetaHuman, Movie Render Queue (MRQ), gRPC, USD, AI / State Machines	Tools:	Git, Confluence, Visual Studio, VSCode, Rider
Networking:	Multiplayer, Unity Netcode for GameObjects, Unity Relay, Vivox	Methodology:	Agile / Scrum, MVC, technical documentation, international collaboration

PROFESSIONAL EXPERIENCE

Aumovio (formerly Continental) · **Unreal Engine 5 Developer — Work-Study** Rambouillet · Jan 2025 – Sep 2026
3D Real-Time Team · International team (Germany, France, USA) · Reporting to German project manager

Vehicle-Interior (In-Cabin) Simulation & Synthetic Data Generation (UE5 / C++) [Product page ↗](#)

- UE5 technical reference for the development team of 4 people (1 dev, 1 designer, 1 3D artist, 1 intern) — PR merges, engine expertise, onboarding teammates.
- Built a real-time vehicle-interior (in-cabin) simulation tool: configures MetaHuman avatars (clothing, hair, blend shapes, animations), virtual cabin environments, lighting and accident/distraction scenarios, then renders synthetic datasets via Movie Render Queue (MRQ) to train cabin-sensing AI models for automotive cameras.
- R&D on gRPC (Protocol Buffers) and USD plugin in UE5 — fixed critical Shipping-build mesh bug, solution published on UE community forums. Full Confluence documentation delivered.
- Collaborated cross-functionally with AI, data analysis and sensor teams.

XR — Apple Vision Pro Port (Unity / PolySpatial)

- Transposed an interactive Meta Quest XR app to Apple Vision Pro using Unity & PolySpatial (Hybrid mode) — real-time interactive vehicle-interior customisation experience.
- Solved novel visionOS/PolySpatial technical challenges (Near/Far Interactor, shader compatibility); shared solutions on Unity community forums.

In plain terms: I built a tool that automatically generates images of drivers and passengers to train in-car monitoring systems, and ported an interactive experience to the Apple Vision Pro headset — acting as the team's Unreal Engine technical lead.

TE Connectivity · **Software Developer — Internship** Vernouillet · Apr – Jun 2023
Defined specs, built a prototype (C#.NET + database), and delivered the final production software.

GAME & SIMULATION PROJECTS

Slip Away UE5 · C++ · PC · In progress GitHub Wave propagation, board gen., editor tools, UI/HUD, state machines. Development team of 9 people.	Onryō UE5 · C++ · PC itch.io · GitHub Possession system, FPS mechanics, dual AI/player state machines, UI/HUD. Development team of 6 people.
GollumGO UE5 · Blueprints · PC itch.io · GitHub Ring mechanic, enemy AI state machines, DataTable node graph. Development team of 6 people.	Wendogo Unity 6 · C# · Android · Multiplayer GitHub Server-authoritative multiplayer (Netcode), Unity Relay, Vivox. Development team of 10 people.
Custom 3D Engine Vulkan · C++ · Solo GitHub Vulkan pipeline, 6-axis camera, transform components, GLSL shaders.	Japanese Kanji App C# · .NET · WPF · Solo GitHub Windows desktop app, JSON bulk import, custom MSI installer.

In plain terms: across these projects I programmed the game systems (gameplay, AI, interfaces, multiplayer) that make each game playable and stable, often as the team's technical lead.

EDUCATION

Master's — Game Programming (Graduated)
ICAN Paris · 2024–2026
Bachelor's — Computer Science
Université de La Rochelle · 2021–2024

LANGUAGES

French: Native
English: Professional (written & spoken)
Japanese: Basic (learning)
